

***From the Concentra Website-***

***“Comprehensive results measurement can and must become available in every medical condition. Huge value improvement will occur as all system participants come to expect and use such information. The universal development and reporting of results information at the medical condition level may well be the single highest priority to improve the performance of the health care system.”***

Tom Fogarty, M.D.

Executive Vice President,  
Chief Medical Officer  
CONCENTRA

No data = no medical science = no managed care

In **physical medicine**, strength, range of motion and associated capabilities are measured via patient tests to provide objective data required for ***“comprehensive results measurement”***.

The DynaMyo System can electronically measure, record and analyze these objective patient musculoskeletal capabilities for virtually ***every muscle group/ system and condition***, generating objective patient data and providing the physical medicine platform for ***“The universal development and reporting of results information at the medical condition level.”***
